SPECIAL REPORT - MOON'S NORTH NODE**The Moon's North Node Leaving Gemini and Entering Taurus**

A node is a point of intersection. The Moon's Node is the point that the Moon crosses the ecliptic on its monthly orbit around the Earth. The North Node is the point the Moon crosses the ecliptic, while ascending or heading north. The South Node is always exactly 180 degrees in longitude from the North Node, but Astrological tradition dictates using the North Node as the primary reference point. Therefore our analysis will be primarily based on a north node perspective and references to the node, unless otherwise specified, will be referring to the Moon's North Node.

The Node takes 18.61 years to make a complete cycle through 360 degrees of longitude, thereby transiting all twelve signs of the Zodiac. That means that the Node spends an average of 1.5508333 years or 18.61 months in each sign. A cycle of 18.61 years, plus or minus 2.5%, is one of the most prominent cycles prevalent among the well respected research of the Foundation For The Study of Cycles (FSC).

FSC is an 81 year old not for profit research foundation. You can contact FSC on the internet at <http://www.foundationforthestudyofcycles.org> . FSC is considered the foremost cycles research organization in the world.

During each of the twelve transitional periods when the Node transits into the next astrological sign, an important rotational shift in different sectors of the economy and markets usually occur. Two glaring examples are: 1) January - February 1980, the Node leaves Virgo and enters Leo, Gold, Silver, and inflation top; 2) October - November 1987, Moon's North Node leaves Aries and enters Pisces - Stocks - Bonds crash to a low and Grains finish major bottoming pattern to begin bull market fueled by the worst drought since the 1930's. 3) October 2001, North Node leaves Cancer and enters Gemini - Commodity prices via the CRB reaches multi year lows and stocks beginning bottoming process, leading to the 2007 peak in economic recovery and commodity boom.

The Node's normal progression is 'backwards' through the signs. December 22, 2021, the Node will leave Gemini and enter Taurus. It will then be transiting through Taurus for the next 18.61 months. Trends begun June 2020 are likely to culminate or come to an end this month. Trends beginning around December 22, 2021 are likely to culminate in July 2023. Near term, the areas potentially affected by the North Node Leaving Gemini are: Virgo - Soybeans; Libra - Sugar; Sagittarius - Oats; Aquarius - Copper; and Pisces - Oil.

Longer term, the primary areas to watch are: Taurus - Cattle, Cotton, Real Estate, and the Financial Area. Secondly, the markets to watch are: Leo - Corn, Gold, Oj; Virgo - Soybeans; Scorpio - Cocoa, Hogs, & Bonds; Capricorn - Coffee; and Aquarius - Copper.

November Review - "The S&P had a good uptrend for most of October, contrary to the prophets of October doom. However, it is true that there is a historical seasonal pattern for a low in October. The fact that the S&P rallied to a new all-time high during October to defy this pattern, brings up the possible scenario for an inverted seasonal pattern, which occurs occasionally. Our Fractal Forecast model is showing that the S&P could be near the high of the year. Coincidentally, we have the possibility for a very interesting harmonic convergence for 11/1-11/2. Please see below "Market Math" and note 11/02 is 4,624 days from the MAJOR 3/06/2009 low. Now, consider that we have a triple change in trend window due for the 10/29 weekend, which spills into 11/1. The S&P 500 hit a new all-time high on 10/29 at 4608.08. If Friday's rally were to spill-over into Monday, the S&P could easily hit 4624. And if the rally stretched into Tuesday, 11/2, hitting 4624, it would be a perfect and rare Gann squaring of time and price at a square number via 4624 which is 68^2 . For this to work, the market must get to close to that number, in that time window, and stop within a small margin of error. If it doesn't work send your complaints to W.D. Gann. LOL!

December Update – The S&P had a strong up trend for most of November, that is until the high on 11/22, with the market making it's peak within one hour of Mercury 0 South Latitude. The S&P, at a minimum, is now in a short term down trend, having totally wiped out the November rally, in a few days.

Looking ahead, we have a long list of huge Astro events. Here are some of the very top ones:
 11/30 AC – Neptune in Pisces turns Retrograde; and 12/03 AC – Solar Eclipse at Perigee. The biggest cluster of this month and maybe for many months is over the 12/17 weekend: Saturn Contra-Parallel US North Node; Full Moon at Apogee; Venus in Capricorn turns Retrograde; Mars 0 South Latitude; and Venus 0 North Latitude.
 12/22 – The Moon's North Node leaves Gemini and enters Taurus. 12/23 AC – Geo Saturn 90 Uranus.
 12/28 AC – Geo Jupiter enters Pisces. 12/31 AC – New Moon in Capricorn at Perigee. WOW!!!

From all of that, there is the potential for some very large swings in the S&P. Stay Tuned!

Market Math –

11/30 – 7,921 (89^2) from the major 3/24/2000 high.

GRAINS

The historical short term key to the grains, especially Corn and Soybeans, has been a combination of the lunar cycle and the movements of Mercury. These markets tend to make short term reversals on New Moons and Full Moons. Historically, Full Moons have been lows and New Moons have usually been highs. However, recently this pattern has been inverted. Mercury turns retrograde approximately every 120 days, for a period of about 21 days. Grains tend to make highs at Mercury Retrograde and lows when it turns Direct. Previously, Mercury turned Retrograde in Libra, 9/24 AC and turned Direct 10/18 AM.

An ideal lunar cycle setup is when a market has a sizeable move into a Full Moon or a New Moon. Recently, Grains have been responding to the monthly solar ingress, which is the day the Sun changes signs.
