# Weekly Focus

### Bond yields increasing

This week, we have seen a significant increase in bond yields in both the US and Europe. Markets are reducing expectations for rate cuts from central banks, which are now priced to happen only slowly. This follows signals from the central banks themselves that they are still ready to combat inflation which remains too high.

In our view, uncertainty over the economic outlook remains large, and we see a significant risk that the interest rate outlook will have to be adjusted lower again.

There has been a serious tightening of financing conditions both in the US and the euro area, and the market move towards higher yields is tightening conditions further. Current market pricing implies a very soft landing for the economy, and history shows that such expectations are often too optimistic.

On the inflation side, we got the preliminary September data for the euro area, where the y/y inflation rate declined from 5.2% to 4.3%. This decline was largely driven by base effects, but the m/m increase in both headline and core price indices also declined and landed close to 0.2%, which is close to consistent with 2% annual inflation. This is a volatile measure but nevertheless good news for the ECB.

Large government borrowing is also behind the increase in bond yields. This week, we had downwards revisions to the outlook for public finances in France and Italy, but Germany lowered its estimated borrowing requirement for this year.

One reason behind higher bond yields could also be expectations of monetary policy tightening in Japan through an easing of the yield curve control. We agree that this is likely to happen in the not too distant future, however inflation in Japan slowed from 2.8% to 2.5% y/y in September. The quarterly Tankan business survey due Monday and wage data Friday will be key to judge the longer term inflation momentum.

In China, property developer Evergrande returned to the headlines with news that it had missed a bond payment and scrapped creditor meetings. This is not helpful to the efforts for revitalising home buying and hence the construction part of the economy, and is adding to concerns over growth. Note that the coming week is the Golden Week holiday in China.

A US government shutdown might be a reality from Monday if the US Congress fails to either pass a budget agreement or a resolution to continue with the old budget temporarily. A shutdown would mean a sharp reduction in government spending until it is resolved and could have a somewhat negative effect on growth if it lasts more than a few weeks, but it is not a threat to the US meeting its debt payments like the debt ceiling problem earlier this year was. Also, a shutdown would mean that government statistics such as the coming week's job report and job openings are not published, whereas private sector data such as the ISM and the ADP employment report are not affected. If we do get data, it could be very important for whether or not the soft landing narrative persists.

On the central bank front, we will get rate decisions in Poland, Australia and New Zealand.

#### Key global views

- Stagnation and periodic contraction in the US and in Europe in 2023
- US and euro area headline inflation set to decline further, but core inflation to remain sticky
- Fed and ECB policy rates have peaked, rate cuts start gradually next year

#### Key market movers

- Monday: US ISM manufacturing, euro area unemployment
- Tuesday: US job openings\*
- Wednesday: US ISM nonmanufacturing, ADP employment
- Friday US job report\*
  - \*Will not be published if there is a shutdown of US government

#### Selected reading from Danske Bank

- EUR excess liquidity ECB to speed up liquidity tightening next year, September 21
- Market Guide Near-term risk of higher EUR/USD, September 25
- Spending Monitor Retail spending weakens through first half of September, September 27

### Scandi market movers

• In Denmark, we are expecting the flash estimate for Q3 wage growth from the Confederation of Danish Employers (DA) on Monday. Wages grew by 3.4% in Q2 2023, reflecting the new collective agreements. However, far from all companies had implemented the agreed pay rises when the data was collected, plus the increase in the employer pension contribution was not included. However, these factors will be part of the Q3 figures, which is why we are expecting a more pronounced increase in wage costs.

Tuesday should also bring data on Danmarks Nationalbank's intervention in the FX market in September. However, the EUR/DKK cross has been stable around the central parity rate, so we are not expecting the central bank to have intervened in September.

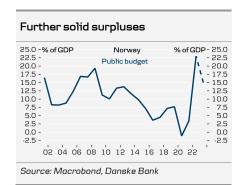

<u>September PMI</u> is out Monday and <u>the services</u> ditto on Wednesday. Both NIER Manufacturing confidence and the German flash PMI was higher in September, hence, the stage looks set for a slight rebound.

The Debt Office releases the September <u>budget balance</u>. The accumulated difference vs forecast up to and including August was a hefty SEK 46 bn surplus. The main reason for this was much smaller than expected payments in August for company electricity support (SEK 30bn less than assumed), but corporate taxes were also higher than expected. DO forecasts a SEK 8 bn deficit in September. It seems fair to assume that delayed payment of electricity support can push that deficit considerably higher.

• In **Norway**, the government will be unveiling its <u>budget</u> for 2024. As usual, we are mostly interested in how expansionary the budget will be – in other words, how the proposals would affect economic activity. In a situation where many households and firms are battling with higher costs and higher interest rates, it would be tempting to table an expansionary budget. In the current situation, however, with high inflation, strong activity and a tight labour market, monetary policy is being used actively to limit growth. This naturally reduces the government's room to manoeuvre, and so we expect the budget to be more or less neutral, which would tie in nicely with Norges Bank's projections in the September monetary policy report. The government's estimates for the non-oil budget deficit and for tax revenue from the oil sector will also give us an idea of how much currency the central bank will need to exchange for the Ministry of Finance next year.

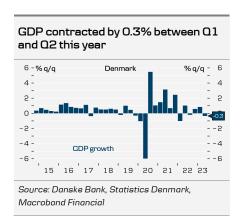

### Scandi update

#### Denmark - GDP growth from Q1 to Q2 revised down to -0.3%.

Statistics Denmark has revised growth from Q1 to Q2 23 down to -0.3% from 0.3%. The main culprit was an underestimation of imports. Hence, demand was the same or better – domestic production merely covered a smaller proportion of it. Nevertheless, comparing to Q2 last year, there was still positive growth of 0.9%, which is decent given the global slowdown. Much of the growth was driven by the pharmaceutical industry – ignore that, and the economy actually shrank by 1.5%, which underlines the difficulties faced by the rest of the economy.

Retail sales rose by 3.9% from July to August (seasonally and price adjusted). This represents a marked improvement but has to be seen against retail sales falling by a similar amount between June and July. Compared to the same period last year, retail sales were down 1%, however, so Danes are generally spending cautiously in the shops.

There were 500 more unemployed in August compared to July in Denmark. That is 200 less than the unemployment indicator pointed to earlier in the month. The unemployment rate rose to 2.9%, which is also a sign that much of the economy is in recession.

#### Sweden - Mixed bag of figures with a slightly negative touch

The producer price index for August decreased by 0.7% in August m/m. This also meant 5.9% y/y which marks the biggest y/y decline ever in the dataset since it started being released in 1990. The decline was mainly led by energy-related products that decreased by 37.5% y/y. The most important take-away from the numbers are that front-loaded consumer inflation at the producer level is now back to the pre-pandemic range, which is consistent with 2 % inflation target.

Export of goods for July decreased by 4% m/m. While this may at first sight seem to indicate gloomy prospects for the Swedish export sector, one should instead look at the situation from broader perspective. August's trade balance figures dropped far less which shows that net real goods trade balance instead continues an upward trend suggesting the impact on GDP will shift from being a drag in Q2 to giving a boost of the roughly the same order in Q3. Household lending growth decreased to by 0.7% y/y in August where 83% of the total consisted of mortgages. The current interest rate level affects households as 75% of all new mortgages in August where had a floating rate, compared to 34% in March 2022.

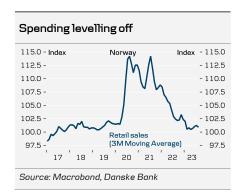

NIER's overall September Economic Tendency Indicator rose solely on the back of a bounce up to the 100 threshold in manufacturing confidence. Measures for all other sectors fell, mostly in retail trade. Price plans dipped in manufacturing and retail trade but unfortunately rose in the service sector which remains a major contributor to overall inflation. Price plans remain too high in retail trade and services to be consistent with 2 % inflation. To complement the increased unemployment rate number in August (whose reliability we question), the survey also included labour market indications which do not support any sudden increase in unemployment as businesses hiring expectations and households' personal perceived risk of being unemployed remains almost unaltered at neutral levels.

#### Norway - Spending levelling off

Retail sales fell further in August and have moved more or less sideways in recent months. Negative real wage growth and ever higher mortgage rates are currently massive headwinds for households and will remain so for the rest of the year. On the other hand, unemployment is still low despite edging up. The jobless rate was unchanged at 1.9% in September, as the rise in the number of people out of work over the spring and summer largely stalled. The number of new job openings is still high but creeping down, which may be a sign that demand for labour is softening slightly.

#### Disclosures

This research report has been prepared by Danske Bank A/S ('Danske Bank'). The author of this research report is Las Olsen, Chief Economist.

#### Analyst certification

Each research analyst responsible for the content of this research report certifies that the views expressed in the research report accurately reflect the research analyst's personal view about the financial instruments and issuers covered by the research report. Each responsible research analyst further certifies that no part of the compensation of the research analyst was, is or will be, directly or indirectly, related to the specific recommendations expressed in the research report.

#### Regulation

Danske Bank is authorised and regulated by the Danish Financial Services Authority (Finanstilsynet). Danske Bank is authorised by the Prudential Regulation Authority in the UK and subject to regulation by the Financial Conduct Authority and limited regulation by the Prudential Regulation Authority. Details about the extent of our regulation by the Prudential Regulation Authority are available from us on request.

Danske Bank's research reports are prepared in accordance with the recommendations of Capital Market Denmark.

#### Conflicts of interest

Danske Bank has established procedures to prevent conflicts of interest and to ensure the provision of high-quality research based on research objectivity and independence. These procedures are documented in Danske Bank's research policies. Employees within Danske Bank's Research Departments have been instructed that any request that might impair the objectivity and independence of research shall be referred to Research Management and the Compliance Department. Danske Bank's Research Departments are organised independently from and do not report to other business areas within Danske Bank.

Research analysts are remunerated in part based on the overall profitability of Danske Bank, which includes investment banking revenues, but do not receive bonuses or other remuneration linked to specific corporate finance or debt capital transactions.

Danske Bank is a market maker and liquidity provider and may hold positions in the financial instruments mentioned in this research report.

Danske Bank, its affiliates and subsidiaries are engaged in commercial banking, securities underwriting, dealing, trading, brokerage, investment management, investment banking, custody and other financial services activities, may be a lender to the companies mentioned in this publication and have whatever rights are available to a creditor under applicable law and the applicable loan and credit agreements. At any time, Danske Bank, its affiliates and subsidiaries may have credit or other information regarding the companies mentioned in this publication that is not available to or may not be used by the personnel responsible for the preparation of this report, which might affect the analysis and opinions expressed in this research report.

#### Financial models and/or methodology used in this research report

Calculations and presentations in this research report are based on standard econometric tools and methodology as well as publicly available statistics for each individual fixed income asset.

We base our conclusion on an estimation of the financial risk profile of the financial asset. By combining these risk profiles with market technical and financial asset-specific issues such as rating, supply and demand factors, macro factors, regulation, curve structure, etc., we arrive at an overall view and risk profile for the specific financial asset. We compare the financial asset to those of peers with similar risk profiles and on this background, we estimate whether the specific financial asset is attractively priced in the specific market. We express these views through buy and sell recommendations. These signal our opinion about the financial asset's performance potential in the coming three to six months.

More information about the valuation and/or methodology and the underlying assumptions is accessible via https://danskeci.com/ci/research/research-disclaimer. Select Fixed Income Research Methodology.

#### Risk warning

Major risks connected with recommendations or opinions in this research report, including a sensitivity analysis of relevant assumptions, are stated throughout the text.

#### Completion and first dissemination

The completion date and time in this research report mean the date and time when the author hands over the final version of the research report to Danske Bank's editing function for legal review and editing.

The date and time of first dissemination mean the date and estimated time of the first dissemination of this research report. The estimated time may deviate up to 15 minutes from the effective dissemination time due to technical limitations.

See the final page of this research report for the date and time of completion and first dissemination.

#### Validity time period

This communication as well as the communications in the list referred to below are valid until the earlier of (a) dissemination of a superseding communication by the author, or (b) significant changes in circumstances following its dissemination, including events relating to the market or the issuer, which can influence the price of the issuer or financial

#### Investment recommendations disseminated in the preceding 12-month period

A list of previous investment recommendations disseminated by the lead analyst(s) of this research report in the preceding 12-month period can be found at https://danskeci.com/ci/research/research-disclaimer. Select Fixed Income Trade Recommendation History

Other previous investment recommendations disseminated by Danske Bank are also available in the database.

See https://danskeci.com/ci/research/research-disclaimer for further disclosures and information.

This research has been prepared by Danske Bank A/S. It is provided for informational purposes only and should not be considered investment, legal or tax advice. It does not constitute or form part of, and shall under no circumstances be considered as, an offer to sell or a solicitation of an offer to purchase or sell any relevant financial instruments (i.e. financial instruments mentioned herein or other financial instruments of any issuer mentioned herein and/or options, warrants, rights or other interests with respect to any such financial instruments) ('Relevant Financial Instruments').

This research report has been prepared independently and solely on the basis of publicly available information that Danske Bank A/S considers to be reliable but Danske Bank A/S has not independently verified the contents hereof. While reasonable care has been taken to ensure that its contents are not untrue or misleading, no representation or warranty, express or implied, is made as to, and no reliance should be placed on, the fairness, accuracy, completeness or reasonableness of the information, opinions and projections contained in this research report and Danske Bank A/S, its affiliates and subsidiaries accept no liability whatsoever for any direct or consequential loss, including without limitation any loss of profits, arising from reliance on this research report.

The opinions expressed herein are the opinions of the research analysts and reflect their opinion as of the date hereof. These opinions are subject to change and Danske Bank A/S does not undertake to notify any recipient of this research report of any such change nor of any other changes related to the information provided in this research report.

This research report is not intended for, and may not be redistributed to, retail customers in the United Kingdom (see separate disclaimer below) and retail customers in the European Economic Area as defined by Directive 2014/65/EU.

This research report is protected by copyright and is intended solely for the designated addressee. It may not be reproduced or distributed, in whole or in part, by any recipient for any purpose without Danske Bank A/S's prior written consent.

#### Disclaimer related to distribution in the United States

This research report was created by Danske Bank A/S and is distributed in the United States by Danske Markets Inc., a U.S. registered broker-dealer and subsidiary of Danske Bank A/S, pursuant to SEC Rule 15a-6 and related interpretations issued by the U.S. Securities and Exchange Commission. The research report is intended for distribution in the United States solely to 'U.S. institutional investors' as defined in SEC Rule 15a-6. Danske Markets Inc. accepts responsibility for this research report in connection with distribution in the United States solely to 'U.S. institutional investors'.

Danske Bank A/S is not subject to U.S. rules with regard to the preparation of research reports and the independence of research analysts. In addition, the research analysts of Danske Bank A/S who have prepared this research report are not registered or qualified as research analysts with the New York Stock Exchange or Financial Industry Regulatory Authority but satisfy the applicable requirements of a non-U.S. jurisdiction.

Any U.S. investor recipient of this research report who wishes to purchase or sell any Relevant Financial Instrument may do so only by contacting Danske Markets Inc. directly and should be aware that investing in non-U.S. financial instruments may entail certain risks. Financial instruments of non-U.S. issuers may not be registered with the U.S. Securities and Exchange Commission and may not be subject to the reporting and auditing standards of the U.S. Securities and Exchange Commission.

#### Disclaimer related to distribution in the United Kingdom

In the United Kingdom, this document is for distribution only to (I) persons who have professional experience in matters relating to investments falling within article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the 'Order'); (II) high net worth entities falling within article 49(2)(a) to (d) of the Order; or (III) persons who are an elective professional client or a per se professional client under Chapter 3 of the FCA Conduct of Business Sourcebook (all such persons together being referred to as 'Relevant Persons'). In the United Kingdom, this document is directed only at Relevant Persons, and other persons should not act or rely on this document or any of its contents.

#### Disclaimer related to distribution in the European Economic Area

This document is being distributed to and is directed only at persons in member states of the European Economic Area ('EEA') who are 'Qualified Investors' within the meaning of Article 2(e) of the Prospectus Regulation (Regulation (EU) 2017/1129) ('Qualified Investors'). Any person in the EEA who receives this document will be deemed to have represented and agreed that it is a Qualified Investor. Any such recipient will also be deemed to have represented and agreed that it has not received this document on behalf of persons in the EEA other than Qualified Investors or persons in the UK and member states (where equivalent legislation exists) for whom the investor has authority to make decisions on a wholly discretionary basis. Danske Bank A/S will rely on the truth and accuracy of the foregoing representations and agreements. Any person in the EEA who is not a Qualified Investor should not act or rely on this document or any of its contents.
