

Weekly Focus

Central banks continue tightening despite recession fears

Central banks delivered further hikes largely as expected, as inflation pressures remain high despite the rising recession risks. In the US, Fed hiked rates by 75bp as broadly expected, but the updated ‘dot plot’ signalled more hawkish rate expectations than markets had expected. While Powell provided few new signals on the upcoming tightening pace, he repeated that Fed is increasingly focusing on limiting economic growth below potential and looking for signs of cooling labour markets. In contrast, we are forecasting a rebound in the Q3 GDP figures, and thus we are also calling for two more 75bp hikes in the November and December meetings. Read our full *Fed review: Hawkish 75bp – Fast hikes to continue*, 21 September, as well as some underlying thoughts on why we continue to see risks tilted towards Fed having to maintain financial conditions restrictive for longer: *FX Strategy - The bullish case for high US interest rates*, 22 September.

Bank of England hiked by only 50bp yesterday, in line with our expectations but less than what markets had priced in. Recession risks are rising in the UK amid the rapid decline in purchasing power, but we continue to expect further hikes in the coming meetings, see *Bank of England Update - Review: another 50bp hike and we expect more to come*, 22 September. **Norges Bank** also hiked by 50bp, but as it was among the first to start hiking last year, we also think it could be among the first to bring the hiking cycle to a halt, we are only looking for one more 25bp hike in the November, read more in Scandi section below.

The few outliers among the hiking central banks are found in **Turkey**, where the CBRT continued its unorthodox monetary policy by cutting rates by 100bp despite the soaring inflation, as well as in **Japan**. BoJ made no changes to its dovish policy stance, but later it was announced that the Ministry of Finance had instructed it to intervene in the FX markets to limit the rapid JPY weakening for the first time since 1998. Despite this, BoJ is still conducting monetary policy which sends more yen into the market, and we think the pressure to abandon the yield curve control has increased. Read our take in *Research Japan - Bank of Japan intervenes to support JPY*, 22 September.

European recession fears got further boosted by the **September Flash PMIs**, which signalled broad based weakening in the growth outlook. Especially the manufacturing sector is under clear pressure due to a steepening decline in new orders but also rising input costs due to the energy crisis.

This weekend, we will focus on the **Italian elections**, where the right-wing coalition’s win looks like a done deal. Giorgia Meloni’s party Brothers of Italy has increased its lead in the *latest polls*, and the focus will be on the margin of victory. Read our preview here: *Italian Politics Monitor - Unchartered territory*, 9 September.

Markets will continue to digest this week’s central bank meetings, and in the Euro Area main focus will be on Friday’s **September Flash HICP** figures, consensus is looking for another uptick to 9.4% y/y. In the US, focus will be on a wide range of **Fed speakers** as well as the August private consumption expenditures data out on Friday. **In China, August PMIs** will be released on Friday morning, we continue to see downside risks amid weakening export demand outlook.

Key global views

- High risk of recession in Europe in H2 22. We expect the US to fall into recession in Q2 2023
- US inflation to peak in Q3, wage growth to stay high. Euro inflation to stay elevated in Q3 on higher electricity prices. Easing pressure from oil, metals, freight and food to pull global inflation lower in 2023.
- Fed to hike by another 150bp this year, then stop. ECB to hike a further 75bp this year, then stop.

Key market movers

- Mon: German Ifo
- Tue: US Durable Goods Orders
- Wed: BoJ Minutes
- Thur: EA Economic Sentiment Indicators, German Flash CPI
- Fri: China PMIs, EA Flash HICP, US PCE

Scandi market movers

- In **Denmark**, August's retail sales figures are due on Tuesday. Denmark's retail industry remains fairly buoyant despite a downward trend in the sales index during the first seven months of the year. What is notable here is that retail sales have not fallen further. Danish household finances are under considerable strain at the moment, with prices rising on food, energy and almost all other goods and services. Consumer confidence, meanwhile, points to gloom among Danish consumers. This conundrum indicates that many families have not had to cut consumption quite as drastically as perhaps feared considering the pace of price increases. We expect retail sales to continue trending south, though we also expect the decline to be modest.

Thursday is scheduled to bring business confidence figures for September. Industry turned more optimistic about the future outlook in August, while retail trade sentiment deteriorated further. Service industries were still upbeat, though not quite as positive as in July, while the mood in construction remained subdued. The overall business confidence indicator rose slightly in August. We also noted that fewer companies in the retail and industrial sectors expected to raise their prices in the coming 3 months. Nevertheless, more than 40% of retailers and almost 30% of manufacturers still expected to increase prices, which therefore do not appear set to fall anytime soon according to these figures.

Revised national accounts numbers are due on Friday. Preliminary figures indicate the Danish economy stagnated in H1 22. However, growth is often subject to substantial revision, and that revision could be particularly interesting this time around given that growth was very much driven by inventory building in Q2 22.

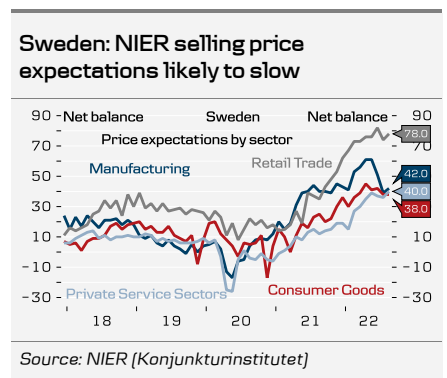

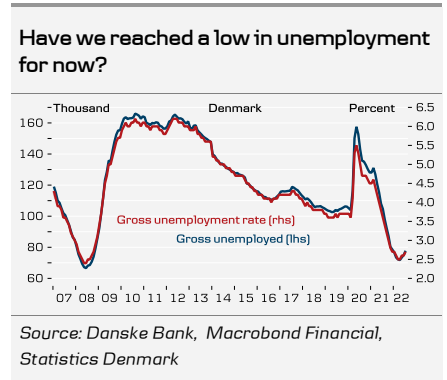

Also due on Friday are the unemployment numbers for August. Unemployment has been increasing for the past three months. Part of the rise is due to Ukrainian refugees joining the workforce who have still to find their footing in the Danish labour market. However, the influx of Ukrainian refugees cannot explain the entire increase, so we will be keen to see whether this trend continues and if these are the first signs that a low in unemployment has been reached for now. Preliminary figures from the Ministry of Employment point to largely unchanged jobless numbers in August.

- In **Sweden**, the upcoming week is fully loaded with speeches from Riksbank's Ingves, Jansson, Flodén and Ohlsson, some of which speak at multiple occasions. Moreover, monetary policy Minutes are released on Thursday 29th.

PPI is usually not a market mover, but the August outcome might be an upside surprise for those who do not realize that the 30 % mom electricity price increase seen in CPI will also show up in PPI.

It is not possible to make any sensible interpretation of the goods trade balance currently as export and import values are sharply inflated by higher prices. Quarterly data shows foreign goods trade volumes rising a much more modest 2-4 % yoy.

In July, retail sales dropped by 3.9 % yoy. August STIL apparel flash index suggest clothing and footwear sales is declining at least 4 % yoy in value terms on which you have to detract another 6 % or so in price increase to get to the volume decline. Whether or not this is indicative for a broader basket of retail sales is very uncertain, but it seems reasonable to expect yet another leg down in August retail sales.

We expect to see a broad-based decline in the NIER September confidence survey. Consumer confidence is already at a 30-year low, but could still move lower as respondents may have become more worried about the outlook for higher inflation, falling property prices and a deteriorating labour market outlook. We believe business hiring expectations and consumer perception of the risk of being unemployed is key going forward as a deterioration would suggest a rising risk for a recession. Selling price expectations are also key. Over the past couple of months, a stabilization has occurred in most sectors, with a peak most notably seen in manufacturing.

- In **Norway**, the tight labour market is obviously an important factor in Norges Bank's aggressive policy rate signals, and the bank is unlikely to change course until the labour market cools. The week's unemployment data for September could therefore be crucial, and we anticipate a slight increase in the jobless rate to 1.7% (seasonally adjusted). This is due to a clear slowdown in economic growth causing demand for labour to soften somewhat, albeit from high levels. Retail sales have naturally been under pressure from the shift in consumption in favour of services following the reopening of the economy, as well as a general erosion of purchasing power due to stronger inflation. Although we believe the underlying trend is still down, we see the possibility of a moderate rebound in August with retail sales climbing 0.7% m/m.

Unemployment to bottom out at record-low levels

Scandi update

Denmark – Danmarks Nationalbank points to recession

Danmarks Nationalbank released its latest forecast for the Danish economy on Wednesday, projecting a 0.1% decline in GDP in 2023, an increase in unemployment and falling house prices. In other words, an economic downturn – and unfortunately probably on the money. Activity is simply outpacing what the economy can bear, both in Denmark and abroad, so inflation is high and a period of discomfort seems unavoidable.

Consumer confidence plumbed to even greater depths this month, sinking from -25.1 in August to -32.1 in September. Delving further into the figures reveals that Danes are extremely negative on both the current situation and the future outlook. Moreover, while they are still much more negative on the prospects for the Danish economy overall, they have become increasingly concerned about their own financial situation. Soaring energy prices in late August presumably contributed to pushing consumer confidence lower. This is no real surprise, for while prices have since retreated again, many Danish consumers probably view this as a portent of what could happen with energy prices this winter. Sharply rising interest rates – on both fixed and variable rate loans – are also making life more expensive for consumers.

The number of people in work fell by 5,000 in July – the first decline since January 2021. This actual decline in employment was due to there being fewer public sector employees. We should remember, though, that the number of workers in the public sector has been unusually high since the start of the pandemic and that we have been expecting a fall for quite some time as staff involved in testing and vaccinating are reduced. However, the drop in employment appears particularly pronounced in education, according to the figures. Private sector employment was largely unchanged in July, which is a sign of weakness given that companies have been hiring more workers every month since the start of 2021. The slowdown was likely due to a combination of weaker demand and rising uncertainty, which has caused companies to press pause, plus many industries still have problems finding labour.

Sweden – Riksbank hikes by 100bp to 1.75%

The Riksbank chose to hike by 100bp to 1.75% and keep QE reinvestment levels unchanged for the remainder of the year, in contrast to our expectation of a 75bp hike and a stop of QE reinvestments. The Riksbank therefore has favored a larger hike over a stop of QE reinvestments. The new rate path signals a slowdown in hiking pace for the November meeting (c. 45bp) and the rate path peaks around 2.5% in Q2 2023. Market is unlikely to buy into that story (FRA curve peaks around 3.6%) and we for now stick to our forecast of 75bp in November. As we said earlier, a February 2023 hike cannot be ruled out but it is not our base case for the moment.

The Riksbank now forecast negative growth for Sweden in 2023, while the forecasts indicates positive growth in both EZ and US for 2023. Despite negative growth in Sweden, the unemployment rate is kept unchanged this year at 7.2% and revised up by only 0.2 p.p for 2023. A quite optimistic view in our opinion.

Valueguard published their home-price index for August this week showing a total decrease of 1.2% s.a driven by a decrease in price on houses while prices on flats actually increased. This means that housing prices in Sweden now in total is down by 5% s.a since the beginning of the year, flats -6% and houses -4%. With the Riksbank rate hike (and more to

Riksbank near term inflation forecast was revised up quite a lot

Source: Maacrobond, Danske Bank, Riksbank.

come), high energy prices and eroded consumer purchasing power we expect housing prices to decline further coming month. With an estimate of another 5-10p.p decline from here.

Norway – Norges Bank raises rate and signals slower pace of hikes

As expected, Norges Bank raised its policy rate by 50bp to 2.25% and signalled that it will probably rise further in November. In its assessment, the bank writes: “The policy rate has been raised from a very low level over the past year, and monetary policy is starting to have a tightening effect on the Norwegian economy. This may suggest a more gradual approach to policy rate setting ahead.” This is a clear signal that the bank is now most likely to return to “normal” rises of 25bp.

The bank’s projections in the accompanying monetary policy report show the policy rate probably being raised by another 50bp in Q4 (25bp in November and 25bp in December) to end the year at 2.75%, and a further 25bp in Q1 to peak at 3.0%. No rate cuts are forecast until H2 2024. The policy rate path would have been even lower during the forecast period had the bank not used its judgement to revise it up slightly, which can perhaps be seen as risk management. Either way, its projections are well below current market expectations.

The bank’s risk assessment seems fairly balanced: “If there are prospects that inflation will remain high for longer than currently projected, there may be a need for a higher policy rate. On the other hand, there is a risk of a more pronounced slowdown in both global and domestic activity. If inflation and capacity utilisation decrease faster than projected, the policy rate may be raised less far.”

The bank’s economic forecasts are largely in line with our own. Its prediction for growth next year is actually lower than ours, but the bank is still forecasting a slightly larger output gap than we are, and so slightly lower unemployment. The big difference is when it comes to the bank’s expectations for wage growth in 2023 (4.6%), 2024 (4.5%) and 2025 (4.2%). We expect the slowdown to bring higher unemployment and, not least, pressure on profitability in the business sector, so we consider those levels of wage growth to be way beyond what firms could bear.

We therefore expect Norges Bank to raise its policy rate just once more in 2022, by 25 bp, such that it peaks at 2.5% at the end of this year. We do not expect any further increases in 2023, and see a high probability of a first rate cut towards the end of that year. The risk to our forecast is if the slowdown does not come as quickly as we anticipate and/or Norges Bank is even more aggressive in fighting inflation and so has less focus on medium-term inflation drivers

Higher in the near term, lower further out

Disclosures

This research report has been prepared by Danske Bank A/S ('Danske Bank'). The author of this research report is Antti Ilvonen, Analyst.

Analyst certification

Each research analyst responsible for the content of this research report certifies that the views expressed in the research report accurately reflect the research analyst's personal view about the financial instruments and issuers covered by the research report. Each responsible research analyst further certifies that no part of the compensation of the research analyst was, is or will be, directly or indirectly, related to the specific recommendations expressed in the research report.

Regulation

Danske Bank is authorised and subject to regulation by the Danish Financial Supervisory Authority and is subject to the rules and regulation of the relevant regulators in all other jurisdictions where it conducts business. Danske Bank is subject to limited regulation by the Financial Conduct Authority and the Prudential Regulation Authority (UK). Details on the extent of the regulation by the Financial Conduct Authority and the Prudential Regulation Authority are available from Danske Bank on request.

Danske Bank's research reports are prepared in accordance with the recommendations of the Danish Securities Dealers Association.

Conflicts of interest

Danske Bank has established procedures to prevent conflicts of interest and to ensure the provision of high-quality research based on research objectivity and independence. These procedures are documented in Danske Bank's research policies. Employees within Danske Bank's Research Departments have been instructed that any request that might impair the objectivity and independence of research shall be referred to Research Management and the Compliance Department. Danske Bank's Research Departments are organised independently from and do not report to other business areas within Danske Bank.

Research analysts are remunerated in part based on the overall profitability of Danske Bank, which includes investment banking revenues, but do not receive bonuses or other remuneration linked to specific corporate finance or debt capital transactions.

Danske Bank is a market maker and liquidity provider and may hold positions in the financial instruments mentioned in this research report.

Danske Bank, its affiliates and subsidiaries are engaged in commercial banking, securities underwriting, dealing, trading, brokerage, investment management, investment banking, custody and other financial services activities, may be a lender to the companies mentioned in this publication and have whatever rights are available to a creditor under applicable law and the applicable loan and credit agreements. At any time, Danske Bank, its affiliates and subsidiaries may have credit or other information regarding the companies mentioned in this publication that is not available to or may not be used by the personnel responsible for the preparation of this report, which might affect the analysis and opinions expressed in this research report.

Financial models and/or methodology used in this research report

Calculations and presentations in this research report are based on standard econometric tools and methodology as well as publicly available statistics for each individual fixed income asset.

We base our conclusion on an estimation of the financial risk profile of the financial asset. By combining these risk profiles with market technical and financial asset-specific issues such as rating, supply and demand factors, macro factors, regulation, curve structure, etc., we arrive at an overall view and risk profile for the specific financial asset. We compare the financial asset to those of peers with similar risk profiles and on this background, we estimate whether the specific financial asset is attractively priced in the specific market. We express these views through buy and sell recommendations. These signal our opinion about the financial asset's performance potential in the coming three to six months.

More information about the valuation and/or methodology and the underlying assumptions is accessible via <https://danskeci.com/ci/research/research-disclaimer>. Select *Fixed Income Research Methodology*.

Risk warning

Major risks connected with recommendations or opinions in this research report, including a sensitivity analysis of relevant assumptions, are stated throughout the text.

Completion and first dissemination

The completion date and time in this research report mean the date and time when the author hands over the final version of the research report to Danske Bank's editing function for legal review and editing.

The date and time of first dissemination mean the date and estimated time of the first dissemination of this research report. The estimated time may deviate up to 15 minutes from the effective dissemination time due to technical limitations.

See the final page of this research report for the date and time of completion and first dissemination.

Validity time period

This communication as well as the communications in the list referred to below are valid until the earlier of (a) dissemination of a superseding communication by the author, or (b) significant changes in circumstances following its dissemination, including events relating to the market or the issuer, which can influence the price of the issuer or financial instrument.

Investment recommendations disseminated in the preceding 12-month period

A list of previous investment recommendations disseminated by the lead analyst(s) of this research report in the preceding 12-month period can be found at <https://danskeci.com/ci/research/research-disclaimer>. Select *Fixed Income Trade Recommendation History*

Other previous investment recommendations disseminated by Danske Bank are also available in the database.

See <https://danskeci.com/ci/research/research-disclaimer> for further disclosures and information.

This research has been prepared by Danske Bank A/S. It is provided for informational purposes only and should not be considered investment, legal or tax advice. It does not constitute or form part of, and shall under no circumstances be considered as, an offer to sell or a solicitation of an offer to purchase or sell any relevant financial instruments (i.e. financial instruments mentioned herein or other financial instruments of any issuer mentioned herein and/or options, warrants, rights or other interests with respect to any such financial instruments) ('Relevant Financial Instruments').

This research report has been prepared independently and solely on the basis of publicly available information that Danske Bank A/S considers to be reliable but Danske Bank A/S has not independently verified the contents hereof. While reasonable care has been taken to ensure that its contents are not untrue or misleading, no representation or warranty, express or implied, is made as to, and no reliance should be placed on, the fairness, accuracy, completeness or reasonableness of the information, opinions and projections contained in this research report and Danske Bank A/S, its affiliates and subsidiaries accept no liability whatsoever for any direct or consequential loss, including without limitation any loss of profits, arising from reliance on this research report.

The opinions expressed herein are the opinions of the research analysts and reflect their opinion as of the date hereof. These opinions are subject to change and Danske Bank A/S does not undertake to notify any recipient of this research report of any such change nor of any other changes related to the information provided in this research report.

This research report is not intended for, and may not be redistributed to, retail customers in the United Kingdom (see separate disclaimer below) and retail customers in the European Economic Area as defined by Directive 2014/65/EU.

This research report is protected by copyright and is intended solely for the designated addressee. It may not be reproduced or distributed, in whole or in part, by any recipient for any purpose without Danske Bank A/S's prior written consent.

Disclaimer related to distribution in the United States

This research report was created by Danske Bank A/S and is distributed in the United States by Danske Markets Inc., a U.S. registered broker-dealer and subsidiary of Danske Bank A/S, pursuant to SEC Rule 15a-6 and related interpretations issued by the U.S. Securities and Exchange Commission. The research report is intended for distribution in the United States solely to 'U.S. institutional investors' as defined in SEC Rule 15a-6. Danske Markets Inc. accepts responsibility for this research report in connection with distribution in the United States solely to 'U.S. institutional investors'.

Danske Bank A/S is not subject to U.S. rules with regard to the preparation of research reports and the independence of research analysts. In addition, the research analysts of Danske Bank A/S who have prepared this research report are not registered or qualified as research analysts with the New York Stock Exchange or Financial Industry Regulatory Authority but satisfy the applicable requirements of a non-U.S. jurisdiction.

Any U.S. investor recipient of this research report who wishes to purchase or sell any Relevant Financial Instrument may do so only by contacting Danske Markets Inc. directly and should be aware that investing in non-U.S. financial instruments may entail certain risks. Financial instruments of non-U.S. issuers may not be registered with the U.S. Securities and Exchange Commission and may not be subject to the reporting and auditing standards of the U.S. Securities and Exchange Commission.

Disclaimer related to distribution in the United Kingdom

In the United Kingdom, this document is for distribution only to (I) persons who have professional experience in matters relating to investments falling within article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the 'Order'); (II) high net worth entities falling within article 49(2)(a) to (d) of the Order; or (III) persons who are an elective professional client or a per se professional client under Chapter 3 of the FCA Conduct of Business Sourcebook (all such persons together being referred to as 'Relevant Persons'). In the United Kingdom, this document is directed only at Relevant Persons, and other persons should not act or rely on this document or any of its contents.

Disclaimer related to distribution in the European Economic Area

This document is being distributed to and is directed only at persons in member states of the European Economic Area ('EEA') who are 'Qualified Investors' within the meaning of Article 2(c) of the Prospectus Regulation (Regulation (EU) 2017/1129) ('Qualified Investors'). Any person in the EEA who receives this document will be deemed to have represented and agreed that it is a Qualified Investor. Any such recipient will also be deemed to have represented and agreed that it has not received this document on behalf of persons in the EEA other than Qualified Investors or persons in the UK and member states (where equivalent legislation exists) for whom the investor has authority to make decisions on a wholly discretionary basis. Danske Bank A/S will rely on the truth and accuracy of the foregoing representations and agreements. Any person in the EEA who is not a Qualified Investor should not act or rely on this document or any of its contents.
