

Weekly Focus

Concerns about coronavirus shake markets

Fears about the spread of the so-called coronavirus in China weighed on financial markets this week. In particular, Chinese stocks and currency took a big hit. US and German bond yields also declined and both oil and metal prices pushed lower.

The count of people infected with the virus continued to rise over the week, from 440 on Monday to 869 on Friday. The number of people who have died from the disease increased from five on Monday to 26 on Friday. The virus is similar to the SARS virus in 2003, which infected 8,000 people across Asia and some other countries and resulted in the death of 770 people before the disease was contained after three to four months. China has acted faster this time and is co-operating with the World Health Organisation but it is still unclear how much it could spread. A concern is the Chinese New Year holiday, which starts today, as it normally involves hundreds of millions of people travelling to their hometowns to celebrate the New Year with their families. We probably will not know how serious the spread of the virus is until we get to the other side of the New Year.

While growth has been improving in China since Q3, the spread of the virus is bound to have a negative effect on the Chinese services sector, as people will travel less than usual and not go out to restaurants, movies, etc. as long as the virus is still spreading. In the short term, the virus has increased uncertainty, not least for the Chinese economy and markets. **Next week, we are due to get the official data on China's manufacturing PMI and non-manufacturing PMI.** Normally we pay most attention to manufacturing but the non-manufacturing PMI may be more in focus this time, as a gauge of any impact of the virus on the services sector.

It has been fairly quiet in the US this week but we look forward to the release of GDP on Thursday, which should reveal growth of around 2% in Q4. The FOMC meeting will also be in focus but is likely to result in an unchanged policy stance. Speaking of central banks, the **ECB meeting this week gave more information about the upcoming review of the ECB's policy and instruments.** It seems the ECB will turn every stone with an open mind and will review climate topics and the effects of the low rates (see *Flash ECB Review – Nothing to see so far...keep moving*, 23 January). Next week, we are due to get a few interesting data releases in the euro area. GDP for Q4 should give more insight into how the weak 2019 ended, while preliminary inflation for January will tell us whether the recent increase in core inflation is only noise, or whether it is for real. We expect euro core inflation to fall back to 1.2% y/y, from 1.3% y/y in December.

While the ECB meeting was not so eventful, **we look forward to the Bank of England (BoE) meeting on Thursday.** Following a string of mixed data releases, we expect the BoE to cut rates by 25bp. However, it is likely to be a close call. The following day, on 31 January, the UK officially leaves the EU.

In Japan, the central bank kept the monetary policy stance unchanged this week, but revised up its 2020 growth forecast on the back of the government's big fiscal spending plan. Next week, we plan to keep an eye on Japanese data on industrial production and retail sales.

Key market movers

- **Monday:** Latest on Chinese virus, German ifo index
- **Wednesday:** FOMC meeting.
- **Thursday:** US GDP, BoE meeting.
- **Friday:** China PMI, euro area GDP, euro area CPI (preliminary).

Scandi market movers

- Upcoming key figures in **Denmark** are likely to be mixed. Monday should see the release of retail sales figures for December, which could be affected by Black Friday for the third month in a row. Much consumption could have been shifted from the surrounding months to November, as a result of Black Friday's extraordinary sales, and as this is a relatively new phenomenon in Denmark, the seasonal correction will probably not capture the full impact. Hence, December's figures may print a little weaker than they actually are. However, consumer confidence and Danes' personal finances remain buoyant, so the underlying trend for retail sales as a whole should still be gently upward, just as before.

December unemployment figures are due on Thursday. Gross unemployment has hovered around 3.7% since the start of 2019 and there is unlikely to have been any great change in December. Job growth eased a little in the autumn and given an increasing labour force due to a higher retirement age, unemployment looks set to rise a little. Also due on Thursday is business confidence for January, while the week ends with property sales in November. Business confidence has received a nudge upwards of late in Denmark's largest trading partner, Germany, and it will be interesting to see if the mood has also turned more upbeat in Denmark.

- Next week in **Sweden**, there is a slew of interesting hard data for December, trade balance, retail sales and household lending, but also NIER's January confidence survey. The latter has shown gradually declining confidence since the end of 2018. The negative trend has mainly been driven by services, construction and manufacturing, while retail trade has remained quite stable during the period, even increasing the past two months. Regarding the manufacturing industry, orders are at the lowest level since 2012 and have been driven by both export- and domestic orders. As we have mentioned earlier, this weak inflow of orders that we have seen in 'soft data' has not showed up in 'hard' order and production data yet but it should soon.

Regarding the trade balance and retail sales, December is not the best month for either of them. November retail sales, however, came out weaker than normal as Black Friday was a disappointment. That may imply that December sales could be a bit better than normal. The December trade balance is likely to show a SEK3bn deficit. Swedish goods foreign trade has been slowing over the past two years and year-on-year growth in exports and imports is likely to remain close to zero.

On the back of a surge in property prices in the fall of last year, caused by Riksbank's message to keep the repo rate and hence floating mortgage rates unchanged for several years, we expect a gradual acceleration in household mortgage credit growth. Over the past couple of months there has been a stabilisation.

- In **Norway**, we have seen a clear deterioration in the data recently, so the January unemployment numbers from NAV are extremely important. There was a surprise jump in the jobless rate to 2.3% in December, while gross unemployment has been more or less flat since September. We do not anticipate any major changes to this picture and expect registered unemployment to stay at 2.3% in January and gross unemployment also to be largely unchanged.

The growing amount of trading around Black Friday (and Black Week) has been playing havoc with the seasonal adjustment of retail sales. Weak October figures were thus followed by growth of 1% m/m in November and we expect this to reverse with a fall of 0.8% in December given the seasonal pattern. This means that consumption of

Could Black Friday affect December retail sales?

Retailers bucking the negative confidence trend (for some reason)

Source: NIER

Unemployment has levelled out

Source: Macrobond Financial, Danske Bank

goods will probably be weak in the latter part of the year, but it should be remembered that consumption of services is growing much faster. Heading into 2020, we see only limited downside risks, as there will be solid growth in real incomes this year and we are unlikely to see a similar rise in the savings rate to that in H2 19.

Scandi update

Denmark – Labour market slowdown continued in November

Wage earner employment fell from October to November by 226, underlining that the Danish labour market is not growing at the same pace as earlier. This is presumably an effect of the global slowdown, but also of the fact that the labour market has tightened and so cannot continue to grow as strongly as before. The slowdown is particularly pronounced in the industrial sector, where employment has fallen for eight months in a row. This contrasts somewhat with the fact that industry has been the growth locomotive in 2019, though the explanation lies in growth generally being concentrated in the less labour-intensive sectors, such as pharmaceuticals and wind turbines. Nevertheless, the figures clearly illustrate that the global industrial slowdown has not gone unnoticed in Denmark.

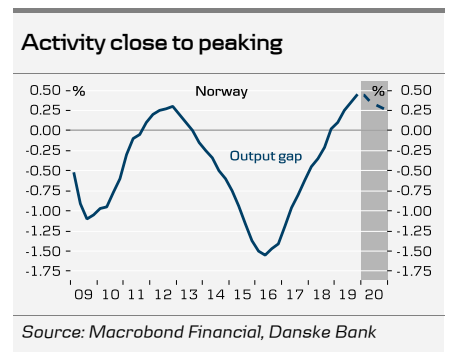

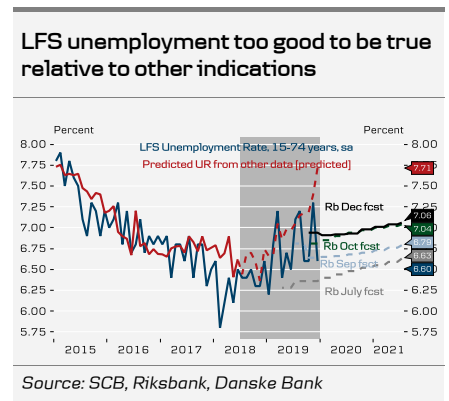

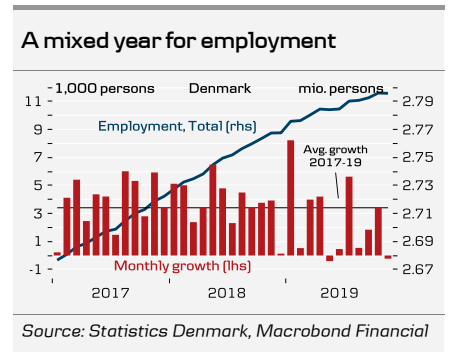

Consumer confidence rose for the second month in a row to 4.5 in January from 2.5 in December. Hence, 2020 has kicked off some way above the low-point reached in November, a 3-year record. Increased optimism was apparent across the board, but the Danes' view on the Danish economy, in particular, was much better in January. This reflects how the autumn was characterised by a string of bad news stories from the global economy due to the trade war and Brexit, for example, whereas recent weeks have seen an improvement in the news flow.

Sweden – do not trust LFS data – it is garbage

According to Statistics Sweden the unemployment rate dropped back to a seasonally adjusted 6.6% from 7.3% the previous month. Actually, only 1 out of 47 y/y changes measured every month was statistically significant in December, which must be an all time low. Another fact supporting the extreme unreliability is that the effective response rate (which had dropped to 50% ahead of the use of external vendors in mid-2018) is probably down to 25% now. To get a feeling for what a more correct idea of the unemployment rate may be, we have regressed LFS data on several other indicators such as PES unemployment rate, hours worked, jobs vacancies, NIER confidence survey's actual employment and PMI weighted employment, estimating the model up to mid-2018, letting it run free after that. The model predicts a considerably higher unemployment rate based on these data (7.7% sa) as can be seen in the chart on the right. Even though such a prediction is of course very uncertain it gives a clear indication of the likely misguidance that the current LFS survey gives. To put it simple, take the data with a big, big pinch of salt. We can only hope the Riksbank does that as well.

Norway – unchanged policy rate, no new signals

As expected, Norges Bank left its policy rate unchanged at 1.5% at Thursday's meeting. This was one of the bank's 'interim' meetings, with no new monetary policy report or press conference. The threshold for putting out new monetary policy signals at such meetings has previously been high, and this once again proved the case. As expected, the new Monetary Policy and Financial Stability Committee indicated that the policy rate will probably remain at the present level 'in the coming period', noting that new information largely bears out the picture of the economy presented in the December monetary policy report. Remember that the policy rate projections in that report showed a roughly 40% chance of a rate hike this year. Norges Bank believes that new information confirms that the Norwegian economy is near a cyclical peak, but that global risks have eased somewhat. If it were to produce another policy rate path today, it would probably be lower but still show a chance of a rate increase. Either way, this shows that the market's expectation of a *cut* this year is

excessive. We think the bank will leave the policy rate alone again in March, but still see a chance of a hike in June. We must admit, however, that the slowdown in the Norwegian economy has arrived faster and been somewhat sharper than we had anticipated. The probability of a hike this year has thus fallen in recent weeks and is now just over 50%.

Statistics Norway's manufacturing confidence indicator also suggests that the slowdown in manufacturing is arriving faster and may be sharper than we had thought. There is still the prospect of growth in the sector, but the outlook is much weaker than at the beginning of last year. The underlying data show a weaker outlook in the supply sector, confirming that oil investment is about to peak. That said, the oil investment survey is pointing to growth in oil investment of around 4% this year, so the downside is still limited. We also believe that the global manufacturing cycle is picking up, which will gradually give Norway's exporters a boost.

Disclosures

This research report has been prepared by Danske Bank A/S ('Danske Bank'). The author of this research report is Allan von Mehren, Chief Analyst.

Analyst certification

Each research analyst responsible for the content of this research report certifies that the views expressed in the research report accurately reflect the research analyst's personal view about the financial instruments and issuers covered by the research report. Each responsible research analyst further certifies that no part of the compensation of the research analyst was, is or will be, directly or indirectly, related to the specific recommendations expressed in the research report.

Regulation

Danske Bank is authorised and subject to regulation by the Danish Financial Supervisory Authority and is subject to the rules and regulation of the relevant regulators in all other jurisdictions where it conducts business. Danske Bank is subject to limited regulation by the Financial Conduct Authority and the Prudential Regulation Authority (UK). Details on the extent of the regulation by the Financial Conduct Authority and the Prudential Regulation Authority are available from Danske Bank on request.

Danske Bank's research reports are prepared in accordance with the recommendations of the Danish Securities Dealers Association.

Conflicts of interest

Danske Bank has established procedures to prevent conflicts of interest and to ensure the provision of high-quality research based on research objectivity and independence. These procedures are documented in Danske Bank's research policies. Employees within Danske Bank's Research Departments have been instructed that any request that might impair the objectivity and independence of research shall be referred to Research Management and the Compliance Department. Danske Bank's Research Departments are organised independently from, and do not report to, other business areas within Danske Bank.

Research analysts are remunerated in part based on the overall profitability of Danske Bank, which includes investment banking revenues, but do not receive bonuses or other remuneration linked to specific corporate finance or debt capital transactions.

Financial models and/or methodology used in this research report

Calculations and presentations in this research report are based on standard econometric tools and methodology as well as publicly available statistics for each individual security, issuer and/or country. Documentation can be obtained from the authors on request.

Risk warning

Major risks connected with recommendations or opinions in this research report, including as sensitivity analysis of relevant assumptions, are stated throughout the text.

Date of first publication

See the front page of this research report for the date of first publication.

General disclaimer

This research report has been prepared by Danske Bank A/S. It is provided for informational purposes only and should not be considered investment advice. It does not constitute or form part of, and shall under no circumstances be considered as, an offer to sell or a solicitation of an offer to purchase or sell any relevant financial instruments (i.e. financial instruments mentioned herein or other financial instruments of any issuer mentioned herein and/or options, warrants, rights or other interests with respect to any such financial instruments) ('Relevant Financial Instruments').

The research report has been prepared independently and solely on the basis of publicly available information that Danske Bank considers to be reliable. While reasonable care has been taken to ensure that its contents are not untrue or misleading, no representation is made as to its accuracy or completeness and Danske Bank, its affiliates and subsidiaries accept no liability whatsoever for any direct or consequential loss, including without limitation any loss of profits, arising from reliance on this research report.

The opinions expressed herein are the opinions of the research analysts responsible for the research report and reflect their judgement as of the date hereof. These opinions are subject to change and Danske Bank does not undertake to notify any recipient of this research report of any such change nor of any other changes related to the information provided herein.

This research report is not intended for, and may not be redistributed to, retail customers in the United Kingdom or the United States.

This research report is protected by copyright and is intended solely for the designated addressee. It may not be reproduced or distributed, in whole or in part, by any recipient for any purpose without Danske Bank's prior written consent.

Disclaimer related to distribution in the United States

This research report was created by Danske Bank A/S and is distributed in the United States by Danske Markets Inc., a U.S. registered broker-dealer and subsidiary of Danske Bank A/A, pursuant to SEC Rule 15a-6 and related interpretations issued by the U.S. Securities and Exchange Commission. The research report is intended for distribution in the United States solely to 'U.S. institutional investors' as defined in SEC Rule 15a-6. Danske Markets Inc. accepts responsibility for this research report in connection with distribution in the United States solely to 'U.S. institutional investors'.

Danske Bank is not subject to U.S. rules with regard to the preparation of research reports and the independence of research analysts. In addition, the research analysts of Danske Bank who have prepared this research report are not registered or qualified as research analysts with the NYSE or FINRA but satisfy the applicable requirements of a non-U.S. jurisdiction.

Any U.S. investor recipient of this research report who wishes to purchase or sell any Relevant Financial Instrument may do so only by contacting Danske Markets Inc. directly and should be aware that investing in non-U.S. financial instruments may entail certain risks. Financial instruments of non-U.S. issuers may not be registered with the U.S. Securities and Exchange Commission and may not be subject to the reporting and auditing standards of the U.S. Securities and Exchange Commission.
